

*How to order / measure an OB Valance*

When ordering/measuring an **OB** Valance make sure you are asking for the tip-to-tip size. We normally add 2" to the blind width to accommodate enough room for the valance to cover around the head-rail.

For Example: When your blind is 28" we will make the valance 30" tip-to-tip.

When ordering/measuring the returns for the valance. We measure the longest part from the front of the valance to the back of the returns. Thickness of a valance is 3/8" – 1/2" so if you are measuring from the back of the valance to the back of the returns is to order your size and add the thickness to it.
